# MAGWINCHLINE

MagWinchLine rope is certified by Germanischer Lloyd

ø mm	24	28	32	36	40	42	44	46	48
g/m	140	160	200	270	340	360	400	450	500
MBL, kN	350	390	480	750	880	930	1000	1200	1300

ø mm	50	54	56	58	60	62	64		
g/m	540	630	700	720	760	800	880		
MBL, kN	1380	1530	1690	1730	1830	1900	2050		

Any other length is available on customer's request

standard length of rope in coil is 100 m, 110 m, 220 m

MagWinchline is a double braided combination rope, which was specially designed to be used in winches. The high strength characteristics and low elongation make this rope attractive for use in single-drum and self-tensioning winches. Well balanced non-kinking construction combines 16-strand core made of polyolefin fibers and tightly braided cover made of mixed fibers with excellent UV-resistance. The presence of Polyester yarns in cover of the rope significantly increases the resistance to abrasion and high temperatures. MagWinchline retains shape with use and it could be widely used on cruise ships, ferries, Ro-Ro vessels, car carriers and tankers.

## Main properties:

- specific gravity in g/cm<sup>3</sup> – 0,97 g/cm<sup>3</sup>  
(does not sink in water)
- melting point in °C – 170°C/150°C
- does not absorb moisture (water)
- resistance to acids
- excellent resistance to abrasion
- excellent UV - resistance

*In Coils*
